DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-18 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 1, 13, 15 and 18: On last line, "the end" has no antecedent basis. It is noted that there are two ends, one for the left eye, and one for the right eye. And these two ends must be at two precise points.

In claims 5-7: On line 3, "the end" has no antecedent basis.

In claim 8: On line 3, "the far point" has no antecedent basis. And this point must be a precise point.

In claim 11: On lines 2 and 3, "the predefined positions" has no antecedent basis.

In claim 12: On line 8, "the end" has no antecedent basis.

In claim 18: The recitation is **incomplete** in that the movement of the targets along the directions of the respective optical axes of the left and right eyes is not seen recited. This movement is considered to be **one of the essential elements** in the visual training in that without this movement the result from the training would be less productive, or in some cases, unproductive. If this is the case, why the effort?

The remaining claims, depending from rejected base claims, inherit the indefiniteness thereof.

Allowable Subject Matter

Claims 1, 12, 13, 15 and 18 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

Claims 5-8 and 11 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

The allowability of all independent claims centers essentially on the simultaneous movements of the targets along the directions of respective optical axes of the left and right eyes, and in the horizontal directions perpendicular to the optical axes.
